Table 1 ENART 911 - treatment modes

Treatment modes / Device levels	911-L1	911-L2
DIAG 1 - diagnostic / Individually dosed mode (**adjustable**)	✔	✔
DIAG 2 - screening mode (**adjustable**)	✘	✔
CONST - universal mode of continuous treatment (**adjustable**)	✔	✔
ΔCONST- special mode of continuous treatment (**adjustable**)	✔	✔
MCONST - continuous treatment mode (**adjustable**)	✔	✔
INTVL - interval treatment mode (**adjustable**)	✔	✔
FMVAR - powerful treatment mode with high dynamics of pulse rate change (**non-adjustable**)	✔	✔
AM - amplitude modulated treatment mode (**adjustable**)	✘	✔
AMFM - mode with amplitude and frequency modulation of the first phase of the pulse (**adjustable**)	✘	✔
FMSW - variable treatment mode (**adjustable**) with high dynamics of automatic change in frequency and distance between pulses in a package	✘	✔
BEE (bee sting) - treatment mode with a powerful short pulse (**adjustable**)	✘	✔
EM - universal treatment mode (**not adjustable**) with an automatically changing pulse frequency depending on the reaction of the body	✘	✔
SC - universal treatment mode (**not adjustable**)	✘	✔
CS - special treatment mode (**not adjustable**)	✘	✔
SM - treatment mode with a high amplitude of the outgoing pulse (**not adjustable**)	✘	✔
EN - universal treatment mode with automatically changing amplitude of the first phase of the impulse depending on the reaction of the organism (**not adjustable**)	✘	✔
IF - infra-low frequency treatment mode (**adjustable**)	✘	✔
QS - treatment mode "**Quick Start**" (**not adjustable**) - includes 10 specialized automatic sub-modes	✘	✔
